

# HTML Newspaper Recreation – Explanation

**Code Structure:** The HTML document follows a standard HTML5 layout with head and body sections. The body is divided into semantic sections including header (masthead), headline banner, top article columns, funeral notice box, bottom news columns, and footer.

**Key Sections:** The header contains the Daily Jang masthead image. The banner section displays the main historic headline image. The top section uses a three-column table layout with a central portrait. The middle section shows a boxed funeral announcement. The bottom section uses another three-column table for additional articles. The footer contains newspaper identification and author credit.

**Design Decisions:** Tables were used to replicate the newspaper's multi-column layout because external CSS was not allowed in the assignment. Semantic tags such as header, section, article, and footer were used to improve structure and readability. Inline styling was applied for borders, alignment, and spacing to match the original newspaper appearance.

**Challenges:** Recreating the historic newspaper proportions without CSS positioning was challenging. Column widths and inline borders were carefully adjusted to achieve visual similarity while maintaining valid and semantic HTML structure.
